

Collaborative Arts-based Research for Social Justice (Routledge Advances in the Medical Humanities)

Public and private, for-profit and not-for-profit, businesses and organisations of all sizes hire cyber security experts. They work for both big and small businesses and organizations.

Technology Government Banking and finance Insurance Health care Law enforcement Telecommunications

A career in cybersecurity can be very rewarding. This fast-paced industry is for those who want a challenge and the exhilaration of solving problems. According to data collected by the Bureau of Labor Statistics, demand for information security analysts is predicted to increase by 31% over the next ten years (BLS).

A rise in cybersecurity occupations makes sense when you think about it. First, there is an ever-increasing demand for skilled cybersecurity workers as technology becomes increasingly pervasive in our daily lives.

There are now not enough well-qualified cybersecurity experts to go around, despite forecasts of more openings in the future.

Candidates now have many possibilities due to the tremendous expansion of the cybersecurity employment market in recent years.

Because of the scarcity of qualified individuals in the field, anyone interested in pursuing a career in cybersecurity may expect a wide range of job options, high wages, and excellent benefits.

The cybersecurity profession has a wide spectrum of occupations up to executive management and all in between.

A security analyst in a SOC could be an option for an entry-level security professional (security operations center). Senior security analysts and incident response (IR) teams are possibilities as a career path for these professionals.
