

Anatomy.app is excellent for the Pre-Doc curriculum. This primary learning tool allows students to visually identify anatomical structure names, locations, and functions.

This format bests PowerPoints, books, cadaver labs, and videos. It provides the big picture and allows students to reach more detail on their own time with a few swipes.

Anatomy.app helped me to clarify and consolidate the relationship between form and function when learning anatomy. The models are well rendered.

The app organizes models to encourage synthesis at a deeper level. The method is effective for the musculature, venous system, nervous system, and organs.
