ACMPE: The American College of Medical Practice Executives

Certified Medical Practice Executive (CMPE) is one of our profession's most respected credentials. Attaining CMPE certification shows a strong commitment to your professional development. Following the steps of advancement through the certification process will increase your knowledge and enhance your job performance. These credentials are recognized by the medical community and consistently being required in job postings. CMPE certified practice administrators can earn 10% and 40% more than non-certified managers (depending group size and location) when compared to non-CMPE certified practice administrators. Obtaining certification alone won't account for the increase in wages; the commitment to continuing education and increased networking opportunities when combined with the credentials of certification add value and competency to your personal management portfolio.
