

## Measures for Clinical Practice and Research: Two-Volume Set

### PCMH Supported Measures

expand all Immunization Preventive Behavioral Health Chronic or Acute Care Care Coordination Health Care Costs

### Reporting Exceptions

In 2024, standardized measures reporting will be required for all practices seeking or renewing their recognition status. NCQA will allow exceptions to standardized measures reporting and will permit practices to submit custom measures in a few unique cases:

Pediatric practices will be permitted to submit a custom measure for the chronic or acute component in QI 01 as there are currently no approved standardized measures for chronic or acute care for pediatric populations.

Practices will be permitted to submit a custom measure for the health care costs component in QI 02 since the two approved standardized measures may not be relevant to all practices.

As a part of standardized measures reporting, practices will be required to submit a full calendar year's data (Jan 1 - Dec 31) unless otherwise specified in the measure description. NCQA recognizes that there can be unique challenges to obtaining a full calendar year of data if a practice were to change vendors mid-year. In such instances, NCQA may grant an exception to full calendar year reporting.

Please note that exceptions to standardized measures for 2024 reporting will be granted on a case-by-case basis. If a practice meets the exception criteria outlined above or faces other barriers that prevent the reporting of standardized measures, then they are asked to submit a PCS ticket through MyNCQA for consideration.

expand all Custom Measures The following are examples of acceptable custom measures for pediatric populations: The following are examples of acceptable custom measures for health care costs:

### Resources

The following resource may be used to explore measure specifications.

eCQI Resource Center: A resource website from The Office of the National Coordinator for Health Information Technology. Contains the most current resources to support electronic clinical quality improvement (eCQI).
